MAJORITY OF CONSUMERS ZEROING IN ON EXACTLY HOW THEY WANT TO USE AN ELECTRIC CAR, NEW SURVEY FROM MINI USA FINDS

Consumers desire more education to get the most out of electric mobility options

Woodcliff Lake, NJ – April 12, 2019 – As the popularity and availability of electric vehicles (EV) continues to grow in the U.S., consumers are zeroing in on how they want to use an EV. 63 percent of consumers said the best way to use an EV is for commuting or city driving, according to a new survey [MINI USA](#) recently commissioned from market research and business intelligence firm [Engine International, Inc.](#) At the same time, 73 percent of consumer surveyed said that battery range of up to 75 miles was sufficient for their daily use.

At the other end of the spectrum, the survey found that there is a need for additional consumer education around EVs, especially when it comes to charging technology and maximizing electric mobility solutions. Nearly three-quarters (74 percent) of consumers surveyed did not know where their nearest EV charging station was located. At the same time company data shows that 80 percent of EV owners tend to charge their cars at home.

When consumers were asked to choose an acceptable amount of time it should take to charge an EV, the most common answer (28 percent) was “I don’t know” followed by “30 minutes” (25 percent).

“It is important for us as a brand to understand how consumers want to use their electric vehicles, and what they know and don’t know about them as we move closer to the launch of the MINI Cooper S E electric vehicle in the U.S.,” said Andrew Cutler, Head of

Corporate Communications, MINI USA. “The more intelligence we gather, the more we can educate consumers about the many benefits of electric mobility and what MINI has to offer in the new MINI Cooper S E electric vehicle coming in early 2020.”

Overall, two-thirds (66 percent) of consumers surveyed believe that EVs are for early adopters, underscoring the need to raise mainstream awareness around EV technology. This finding may also explain that while Federal Tax Credits on EVs certainly incentivize consumers to purchase an EV, there is still a subset of the population that is making the choice to purchase an EV based on factors beyond incentives.

Survey Methodology

The General Population survey was conducted among a sample of 1,004 adults comprising 502 men and 502 women 18 years of age and older on behalf of MINI USA. The online omnibus studies were conducted from March 21 - 24, 2019.

About MINI in the US

MINI is an independent brand of the BMW Group. In the United States, MINI USA operates as a business unit of BMW of North America, LLC, located in Woodcliff Lake, New Jersey and includes the marketing and sales organizations for the MINI brand. The MINI USA sales organization is represented in the U.S. through a network of 125 MINI passenger car dealers in 39 states. MINI USA began selling vehicles in the U.S. in 2002 with the introduction of the MINI Cooper and MINI Cooper S Hardtops. Since then, the MINI Brand in the U.S. has grown to encompass a model range of five unique vehicles.
